

## Onboarding

Each GIS program has slightly different AWS knowledge, applications and needs for their GIS system. GTRI hosts requirements gathering meetings to learn the needs of each program. After confirmed understanding of requirements, we use our baseline architectures to develop a final architecture to meet each program's needs. The onboarding process consists of the following steps:

1. Kickoff/ requirements gathering discussion
2. Customized Architectural diagram and cost estimates review
3. Program approvals of architecture and costs.
4. GTRI uses NIST templates and automated scripts to provision infrastructure
5. Government approval of infrastructure
6. Managed services begin

The onboarding and set up services includes the provisioning of the table below

Stand-Up Services	IaaS	CaaS
Provision AWS Account	✓	✓
Billing and Invoice Setup	✓	✓
AWS Services Setup	✓	✓
VPC Setup	✓	✓
Database Provisioning	✓	✓
EC2 Provisioning	✓	✓
CloudCheckr Setup	✓	✓
Configure GIS Software	✓	✓
Help Desk Setup	✓	✓
Configure Container Runtime		✓
